

INDUSTRIAL BIOMASS BURNERS

Packaging disposal

Products move around on wooden packaging and this packaging eventually breaks and becomes **waste**.

Reduce landfill

Stop paying to have your **wood waste** taken away, turn your wood waste into **energy**.

Waste is energy

There is the equivalent of **£400** of **energy** in a ton of wood.¹

Reduce bills

A company with 1 ton a week of wood waste can save up to **£20,000** a year on energy bills and 35 tons of CO2 emissions. This would give a **5-year return on investment** on a Ranheat WA 150 based system.²

¹ Based on 10p/kWh of Natural Gas, the saving would be more IF Air Source Heat Pumps are used.

² Assuming 10p/kWh, using DEFRA 0.185kg/kWh Natural Gas, Ranheat WA 150 with 15m³ bunker silo and chipper.
